PROFESSIONAL SUMMARY

Systems-oriented Software Engineer with 7+ years of experience engineering scalable application ecosystems across mobile platforms, backend systems, infrastructure automation, deployment workflows, and AI-assisted operational pipelines.

Strong foundation in modern software architecture, distributed systems thinking, containerized environments, and production-grade engineering workflows using React Native, Next.js, NestJS, Node.js, Python, Docker, PostgreSQL, and MongoDB.

Experienced in building end-to-end systems from application layer to deployment infrastructure, including automation workflows, API orchestration, VPS-hosted deployments, rendering optimization, system scalability, and cloud-aware engineering practices.

Currently focused on:

- distributed systems engineering
- AI orchestration pipelines
- infrastructure-aware development
- Dockerized deployment workflows
- backend platform architecture

- workflow automation systems
- production system scalability

Passionate about building intelligent, maintainable, and operationally scalable systems for modern businesses and SaaS-oriented platforms.

CORE ENGINEERING DOMAINS

- End-to-End Product Engineering
 - Distributed Systems Architecture
 - AI Orchestration & Intelligent Automation
 - Platform Engineering
 - Infrastructure-Aware Development
 - Backend Systems Engineering
 - Docker & Containerized Deployments
 - Workflow Automation
 - React Native Ecosystems
 - API & Service Integration
 - Cloud-Native Development Practices
 - Production Performance Optimization
-

TECHNICAL STACK

Systems & Backend Engineering

- Node.js
- NestJS
- Python
- REST APIs
- GraphQL
- PostgreSQL
- MongoDB
- Service-Oriented Architecture

Infrastructure & Platform Engineering

- Docker
- Docker Compose
- VPS Deployment Management
- Linux Server Administration
- Nginx
- CI/CD Pipelines
- GitHub Actions
- Azure DevOps

AI & Automation

- AI Orchestration Workflows
- LLM Integration
- Automation Pipelines
- Agent-Based Workflow Concepts
- Business Process Automation
- Workflow Engineering

Application Engineering

- React Native
- Expo
- Next.js
- ReactJS
- TypeScript
- JavaScript
- Tailwind CSS

Performance & Monitoring

- Chrome DevTools Performance Profiling
- Core Web Vitals (LCP, CLS, INP)
- Lighthouse
- React Hydration Optimization
- Rendering Optimization
- New Relic Monitoring

Collaboration & Tools

- Git
- Jira
- Figma

- Agile / Scrum
-

PROFESSIONAL EXPERIENCE

Rondev Software Development Services / Lizard Interactive Online

Senior Software Engineer / End-to-End Product Engineer

March 2025 – Present

- Architecting and engineering scalable software systems across application, backend, infrastructure, and deployment layers
 - Building distributed application workflows using React Native, Next.js, NestJS, Node.js, and Python
 - Developing AI-assisted operational workflows and orchestration pipelines for modern business automation use cases
 - Designing Dockerized development and deployment environments for scalable engineering workflows
 - Managing VPS-hosted infrastructure, domain routing, SSL configuration, reverse proxy setups, and deployment pipelines
 - Engineering backend services and automation systems supporting scheduling, workflow management, and operational platforms
 - Implementing infrastructure-aware deployment workflows and cloud-native engineering practices
 - Building scalable API integrations and modular system architectures for SaaS-oriented business systems
 - Leading technical direction for platform scalability, maintainability, and operational reliability
 - Continuously researching and applying modern engineering practices in distributed systems, AI orchestration, and infrastructure automation
-

Ascendion / Collabera Team

Frontend Developer (Sub-Lead)

August 2024 – February 2025

Project: Cebu Pacific Air Desktop & Mobile App

- Developed and optimized enterprise-grade cross-platform application systems using React Native (Expo)
 - Implemented scalable frontend architecture patterns and reusable engineering workflows
 - Collaborated with backend engineers, QA teams, and designers to improve application scalability and user experience
 - Investigated rendering bottlenecks, hydration issues, and Core Web Vitals performance metrics
 - Performed production-level diagnostics using Chrome DevTools, Lighthouse, and New Relic monitoring tools
 - Improved rendering efficiency, application responsiveness, and operational frontend performance
-

Viral Picks | Pasig City

React Native Engineer

February 2024 – August 2024

- Engineered interactive cross-platform mobile application systems using React Native
 - Integrated GraphQL APIs and scalable frontend state management workflows
 - Conducted code optimization, maintainability improvements, and performance tuning
 - Collaborated with cross-functional teams to improve application scalability and responsiveness
-

Veritas Pay | Pasig City

Software Engineer (Frontend Systems)

February 2023 – February 2024

- Developed scalable web and mobile commerce systems using ReactJS, Next.js, and React Native
 - Improved rendering performance, SSR workflows, and application responsiveness
 - Optimized React hydration behavior and frontend system scalability
 - Integrated APIs and contributed to modular application architecture improvements
 - Supported performance optimization and production reliability initiatives
-

Freelance & Independent Projects

Software Engineer / Application Developer

February 2020 – January 2022

- Designed and developed business-oriented web application systems for various operational workflows
 - Built reusable engineering structures and scalable application foundations
 - Delivered responsive and maintainable application solutions with focus on usability and performance
 - Maintained and improved existing systems across frontend integration and application logic layers
-

EDUCATION

Bachelor of Science in Computer Science

St. Dominic Savio School — 2013

LANGUAGES

- English
- Filipino
